EDUCATION

University of British Columbia — **Vancouver, BC**
Faculty of Applied Science, Computer Engineering — Start Date: September 2015
Relevant Courses: CPEN 321, CPEN 400, CPSC 221, CPEN 291, APSC 160 — Expected Graduation: May 2020

TECHNICAL SKILLS

Languages: JavaScript, Node.js, HTML, CSS, C, C++, C#, React Native
Tools: Git, JIRA, Jest, Travis CI, Confluence, Slack

WORK EXPERIENCE

Aimsio — May, 2018 – August 2018

Junior Technical Business Analyst

- Developed custom JavaScript code and accompanying unit tests to extend functionalities for clients.
- Onboarded prospective and new clients by regularly meeting and discussing features, efficiently creating those features, presenting them to the client for feedback, and repeating the process until the client's desires are fully achieved, to ensure their desired product was produced efficiently.
- Designed unique print-ready HTML files and documented specific user workflows.
- Researched and prototyped development workflow improvements, including a drag-and-drop HTML and CSS editor and a JavaScript generator.

PerfectMind — May, 2017 – December, 2017

Software Developer & Quality Assurance

- Resolved front-end and back-end features and bug fixes on an MVC web application comprising of C#, JavaScript, HTML, CSS, and SQL components.
- Accomplished data reconciliation and analysis for general ledger reports.
- Ensured the quality and stability of the product through defect verification, recreation, and adjustment.

TECHNICAL PROJECTS

UBSafe – Mobile App (CPEN 321, 1st Place) — September, 2018 – December, 2018

- Developed an app using Node.js and React Native that allows students to form virtual walking groups to monitor their friends travelling to their destinations to ensure that they arrive safely.
- Integrated Facebook authentication for user login, Google Maps for displaying directions, user location, and safety resources, Google Firebase to share real-time location using Firestore and provide push notifications, and Travis CI and Jest for testing and optimization.
- Presented to a panel of judges and received first place out of 30 competing teams.

UBC Bookstore – Online Shopping Website (CPEN 400) — September, 2017 – December, 2017

- Created a web application with online shopping functionality that automatically displays store inventory taken from an online server, allows for the users to store items in their cart, and calculates their purchase total.

Cereal Monitor – Web App with Hardware Communication (CPEN 291) — March, 2017

- Designed an Internet of Things application using an Arduino, force-sensitive resistors, and a Raspberry Pi as a server that tracks a user's pantry items by weight and displays them on a web application.
