EDUCATION

University of British Columbia — **Vancouver, BC**
Faculty of Applied Science, Computer Engineering — September, 2015 - Present

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS, C, C#, Verilog, ARM
Tools: Git, JIRA, Visual Studio, Eclipse, SQL Management Studio, Quartus

WORK EXPERIENCE

Aimsio — May, 2018 – August 2018
Junior Technical Business Analyst

- Developed custom JavaScript code and accompanying unit tests to extend functionalities for clients.
- Communicated with prospective and new clients to ensure their designed product is produced efficiently.
- Designed print-ready HTML files and documented specific user workflows.
- Participated in scheduled team meetings and adhered to specific agendas.

PerfectMind — May, 2017 – December, 2017
Software Developer & Quality Assurance

- Completed development tasks on an MVC web application comprising of C#, JavaScript, HTML, and SQL components.
- Developed features containing Kendo, Knockout, and AJAX frameworks, initially using TFS for version control but later Git.
- Provided data reconciliation and analysis for general ledger reports.
- Ensured the quality and stability of the product through defect verification, recreation, and adjustment.

PJS Systems — April, 2016 – August, 2016
Audio/Visual Systems Installer

- Installed audio and visual systems, including digital displays, full room control units, and public announcement systems.
- Trained and proficient in the use of many technical tools.

TECHNICAL PROJECTS

UBSafe – Mobile App — September, 2018 – December, 2018

- Developed an app using React Native and Node.js that tracks a user's location and ensures they reach their destination safely, while simultaneously displaying safety resources and supporting emergency notifications.
- Tested using frameworks such as Jest and Travis CI.
- Worked with a team of four developers, completing weekly reports detailing project progress and changes in scope.
- Presented to a panel of judges and received first place out of 30 competing teams.

www.marshallelford.com – Personal Website — October, 2017

- Designed a responsive, professional website using HTML, CSS, and JavaScript.

Cereal Monitor – Web App with Hardware Communication — March, 2017

- Designed an Internet of Things application using an Arduino, force-sensitive resistors, and a Raspberry Pi as a server that tracked a user's pantry items by weight and displayed them on a web application.
